Day-1 Shell Scripting Machine Test

Task 6 — Script Execution
For any one script:
• Check current permissions.
• Add execute permission.
• Execute the script successfully.

Ans}

touch welcome.sh
ls -l welcome.sh

Example output:

```
-rw-r--r-- 1 user user 65 Oct 13 18:00 welcome.sh
```

The permissions shown indicate that the file does not yet have execute permission

Chmod +x welcome.sh
Ls -l welcome.sh

Example output:

```
-rwxr-xr-x 1 user user 65 Oct 13 18:00 welcome.sh
```

The x indicates execute permission.

Execute the script./welcome.sh

Task 8 — Error Identification

Identify the errors in the following variable declarations and provide the correct syntax.

1. Incorrect syntax

user name="John"

Correct syntax:

username="John"

Reason: Variable names cannot contain spaces.

2. Incorrect syntax

1name="John"

Correct syntax:

name1="John"

Reason: A variable name cannot begin with a number.

3. Incorrect syntax

name = "John"

Correct syntax:

name="John"

Reason: Spaces are not allowed around the assignment operator (=) in Bash variable declarations.

Example

```
#!/bin/bash
name="John"
echo "$name"
```

Output:

John
